AND ENERGY

Ensure that your database is empty

(My Schema)

Upload your script

Schema

  Upload Script 

Upload Script 

* File 

File size is limited to 1 mb. Only text files can be uploaded (e.g. .sql, .pls, .plb, .pks, .pkb)

* Script Name

Character Set 

* Description

Description must have some value.

 Upload Script

Run your script

The screenshot shows a web application interface for managing scripts. On the left is a sidebar with navigation links: Home, SQL Worksheet, My Session, Schema, Quick SQL, My Scripts (highlighted), My Tutorials, and Code Library. The main content area is titled 'My Scripts \ Script'. In the top right corner, there are three buttons: an information icon, 'Actions', and 'Edit Attributes'. The 'Run Script' button, located to the right of 'Edit Attributes', is green with a play icon and is circled in red. Below the header, a script card for 'PW1 DEMO' is displayed. It includes fields for Name, Description ('PW1 DEMO UPLOAD'), Area ('-'), Visibility ('Private - you are the only person who can access'), Tags ('-'), Script Results (a yellow warning box stating 'We cannot determine the last run date for this script.' with a 'What's This?' link), Last Updated ('Wednesday October 22, 2025 (Created 42 seconds ago)'), and Metrics ('45 Statements, 41,819 bytes'). At the bottom, a code editor shows 'Statement 1' with a trash icon and an 'Edit' button. The SQL code is:

```
CREATE OR REPLACE TYPE INGREDIENT AS OBJECT (  
  -- Define the INGREDIENT object type, representing a medication ingredient.  
  -- Each ingredient has an ID and NAME for identification and description.  
  -- INGREDIENT objects are referenced in MEDICATION_INGREDIENT via REF to  
  -- specify ingredients used in various medications.  
  
  ID      NUMBER,           -- Unique identifier for the ingredient  
  NAME    VARCHAR2(100 CHAR) -- Name of the ingredient
```

Replace your
script after
running it!

is saved!*

Live SQL

Script Results

Script **PW1 DEMO**

✓ **Success**
45 statements ran successfully. 35 objects created.

Statement	Script
1	<pre>CREATE OR REPLACE TYPE INGREDIENT AS OBJECT (-- Define the INGREDIENT object type, representing a medication ingredient. -- Each ingredient has an ID and NAME for identification and description. -- INGREDIENT objects are referenced in MEDICATION_INGREDIENT via REF to -- specify ingredients used in various medications. ID NUMBER, -- Unique identifier for the ingredient NAME VARCHAR2(100 CHAR) -- Name of the ingredient);</pre> Type created.
2	<pre>CREATE TABLE INGREDIENTS OF INGREDIENT (-- Create the INGREDIENTS table based on the INGREDIENT object type, with ID -- as the primary key. This table stores all ingredients used in the system. -- Ingredients in this table are linked to medications via MEDICATION_INGREDI ID PRIMARY KEY -- Primary key to ensure unique ingredients);</pre>

each
statement!*

The screenshot displays a database management interface with a top navigation bar. A green notification banner at the top right states: "Script 'PW1 DEMO' with 45 statements replaced with 45 statements." Below this, the "Script Results" section shows a green status message: "Your script results are current." and a link "What's This?". The "Last Updated" timestamp is "Wednesday October 22, 2025 (Created 4 minutes ago)". The "Metrics" section indicates "4 Executions, 45 Statements, 41,819 bytes".

The main content area shows two statements. Statement 1 is a SQL command to create an object type: `CREATE OR REPLACE TYPE INGREDIENT AS OBJECT (` followed by comments and attributes `ID NUMBER,` and `NAME VARCHAR2(100 CHAR)`, ending with `);`. Below the code, the output "Type created." is displayed and circled in red. Statement 2 is a SQL command to create a table: `CREATE TABLE INGREDIENTS OF INGREDIENT (` followed by comments and the attribute `ID PRIMARY KEY`, ending with `)`. Below the code, the output "Table created." is displayed and circled in red.
