

PW1: Object-relational databases GRADING REPORT

Overview

Group number: **15**

#	Assessment unit	Project Passport	Code	Extended ER Diagram	Class Diagram	Total points received	Max points
1	Tables <i>(see page 2 for detailed score breakdown)</i>	12	72	24	12	120	120
2	Object methods <i>(see page 4 for detailed score breakdown)</i>	4	24	10	2	40	40
3	Functions & operators <i>(see page 4 for detailed score breakdown)</i>	2	18	-	-	20	20
4	Inheritance & method overriding <i>(see page 4 for detailed score breakdown)</i>	2	6	6	6	20	20
TOTAL:		20	120	40	20	200	200

Total before reduction: **200**

Reduction *(see page 5 for detailed information)* : **0**

FINAL TOTAL: **200**

See the detailed information on the following pages.

I. Tables

#	Criteria	Your points				Max points			
		Tables with row type objects	Tables with object columns	Tables with object collections	Total	Tables with row type objects	Tables with object columns	Tables with object collections	Total
1	Project Passport: Table names in PP match precisely with LiveSQL code. Statement numbers are correct. If neither the Statement number nor the table name is correct, further evaluation is not performed. Tables are listed in the correct PP section (with the correct type).	4	4	4	12	4	4	4	12
2	Code:	24	24	24	72	24	24	24	72
2.1	The creation of all relevant types of tables and associated types (correctly specified in the Project Passport) has been successfully demonstrated. The types and tables align with the domain description, are meaningful, free from both technical and logical errors, and fit well into the overall system. Each statement is well-commented and fully adheres to the guidelines for this assignment.	7	7	7	21	7	7	7	21
2.2	The data insertion for each table correctly specified in the Project Passport has been successfully demonstrated. The data insertion effectively and meaningfully showcases various possible scenarios. Each statement is well-commented and fully complies with all other guidelines for this task. If multiple insertion statements are required for data insertion, they are correctly combined into a single PL/SQL block.	7	7	7	21	7	7	7	21
2.3	The retrieval of detailed inserted data has been successfully demonstrated. If the data includes links to other tables, the successful retrieval of related data has also been demonstrated. Each statement is well-commented and fully adheres to all guidelines for this work.	7	7	7	21	7	7	7	21

2.4	The rule is followed that immediately after the type is created (as soon as possible), table creation, data insertion, and retrieval are demonstrated (points are awarded if the code works). Other applicable guidelines or practices for the work (including those shown in the samples) regarding code sequence have been followed.	3	3	3	9
3	Extended ER Diagram: All successfully created tables of the relevant type (and their associated types) are accurately reflected in the extended ER diagram. They fully align with the domain description, are meaningful, and integrate well into the overall system. The representation fully complies with other guidelines for this work.	8	8	8	24
4	Class Diagram: All successfully created tables of the relevant type (and their associated types) are accurately reflected in the extended ER diagram. They fully align with the domain description, are meaningful, and integrate well into the overall system. The representation fully complies with other guidelines for this work.	4	4	4	12
Total		40	40	40	120

10	10	20

V. Grade Reduction

#	Description	Reduction (points)
1	For the video presentation: for the video presentation's non-compliance with the requirements OR absence OR being inaccessible or having an invalid link	0
2	If the quality of the Extended ER Diagram is low (but not low enough for it to be completely ungraded) or otherwise does not meet the formatting requirements	0
3	If the quality of the Class Diagram is low (but not low enough for it to be completely ungraded) or otherwise does not meet the formatting requirements	0
4	For discrepancies between the content of the code file and the LiveSQL code (if evaluated at all) OR if the code file submitted to ORTUS differs from the code downloaded during evaluation from the LiveSQL link, only in comments or similar details	0
5	For the absence of a group work report or its insufficient quality	0
6	For the absence of conclusions or their poor quality	0
7	For not using the report template (if the template structure is followed) OR for significant non-compliance of the report with the template	0
8	For file names not conforming to the template	0
9	For other deficiencies	0
Total		0
